

DARFUS ERP

End-User Manual

A practical guide to inventory, sales, and finance

Language: English

Version: Stage F runtime handover

23 August 2026

Important

This guide describes the current release. Buttons may differ by role, branch, and record status.

Contents

1. أين أبدأ؟ / Where do I start?
2. أساسيات التطبيق / Application basics
3. لوحة التحكم / Dashboard
4. المخزون والاستلام / Inventory and receiving
5. ملفات المخزون / Inventory profiles
6. الأصل والباركود و RFID / Asset, Barcode and RFID
7. التحويل والورشة والجرد / Transfers, Workshop and Count
8. الموردون والمشتريات / Suppliers and purchases
9. العملاء / Customers
10. نقطة البيع / POS
11. الفواتير والمرتجات والحجوزات / Invoices, returns and reservations
12. مركز الذهب / Gold Center
13. شراء الذهب من العميل / Customer Gold Purchase
14. الحسابات والخزنة والتقارير / Accounting, Treasury and Reports
15. المستخدمون والإعدادات / Users and Settings
16. الأخطاء والسلامة / Troubleshooting and safety
17. قاموس الحالات والمهام / Status glossary and task finder
18. قائمة التسليم والتدريب / Handover and training checklist

How to use this guide

Start with the persona that matches your work, then use the quick task recipes before reading the detailed chapters.

Where do I start?

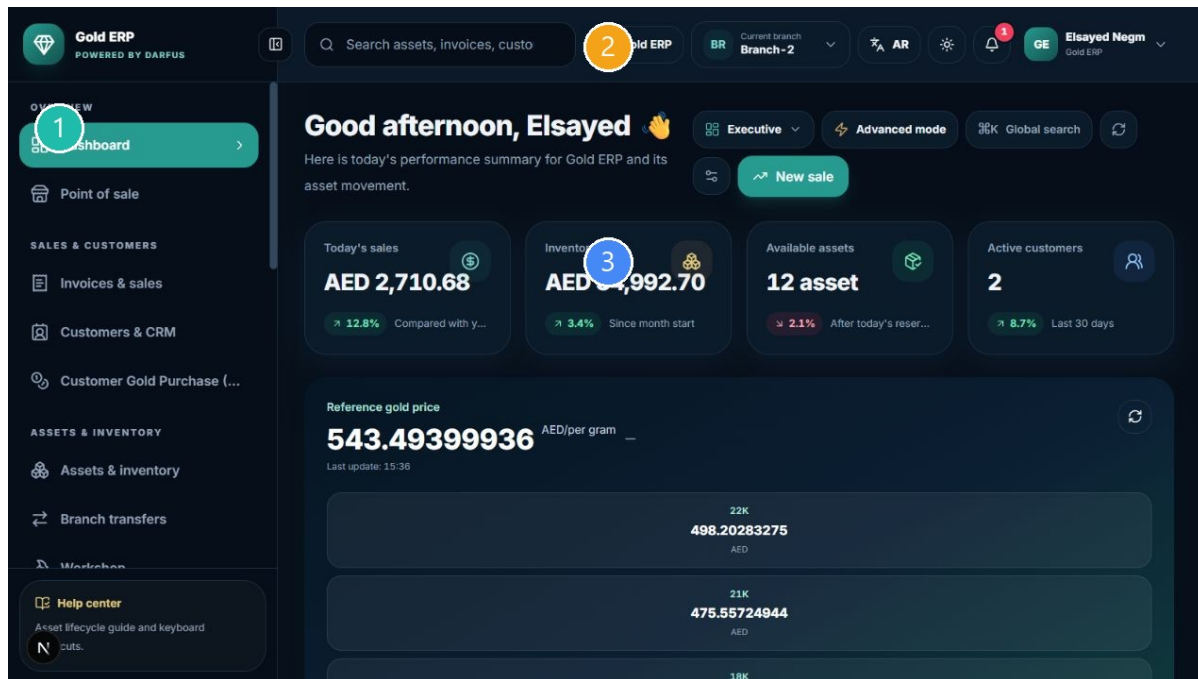

Choose the description closest to your work. You may see fewer screens or buttons than the examples when your role does not include the required permission.

Persona	Main screens	Daily use
الكاشير / Cashier	POS، العملاء، الفواتير / POS, Customers, Invoices	Sell, search by Barcode, review totals, and print the receipt.
موظف المخزون / Inventory / Warehouse	المخزون، الاستلام، التحويل، الجرد، الورشة / Inventory, Receive, Transfer, Workshop, Count	Track pieces, locations, status, and Barcode.
المشتريات / Purchasing	الموردون، الاستلام، الرصيد / Suppliers, Receive, Supplier balance	Receive supplier stock and follow purchase history.
المحاسب / Accountant	الحسابات، القوائم، الخزنة / Accounting, Statements, Treasury	Review journals, balances, and treasury.
مدير الفرع / Branch Manager	لوحة التحكم، التقارير، الموافقات / Dashboard, Reports, Approvals	Monitor performance, approvals, and branch status.
مدير النظام / Administrator	المستخدمون، الصلاحيات، الإعدادات / Users, Permissions, Settings	Manage access, master data, and sensitive settings.

Permission note

A missing button does not necessarily mean the screen is broken; check your role, branch, and record status.

Application basics

Dashboard and branch context

① Navigation ② Company/Branch and language context ③ Current workspace

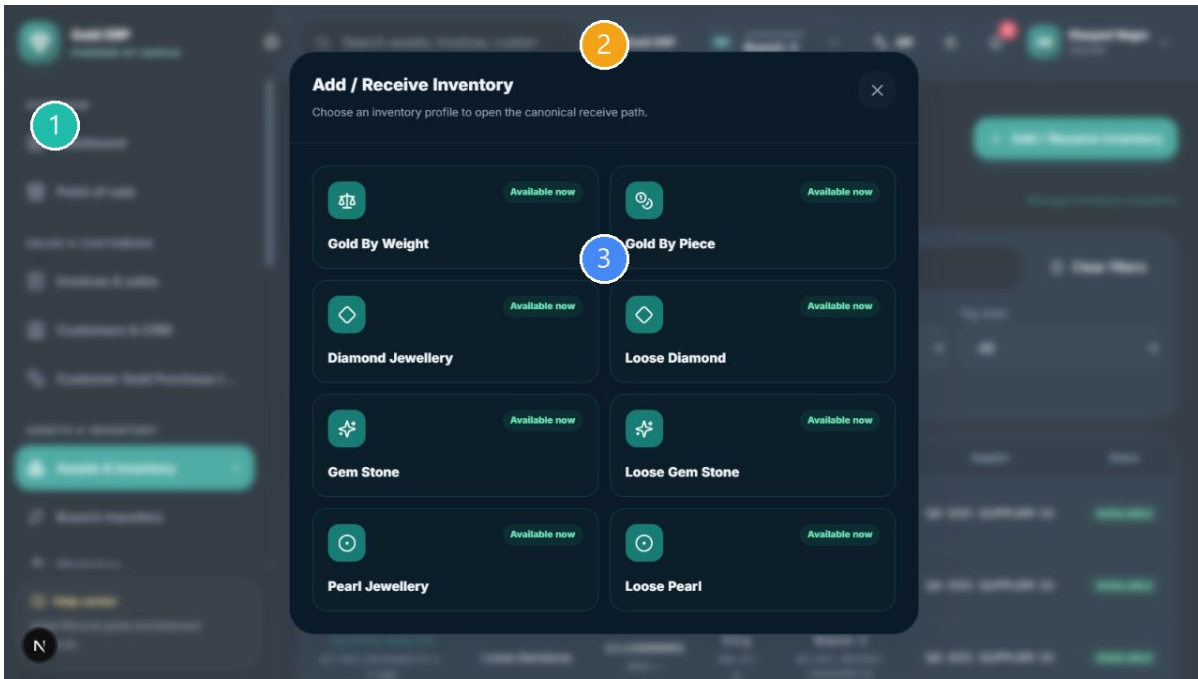

Login, language, and branch

1. Open the login page and enter the account details provided by your administrator.
2. After signing in, check the company and branch shown in the header before starting any action.
3. Use the language control to switch between Arabic and English. The page direction changes automatically.
4. Use the branch control to choose a branch available to your account; changing the branch does not move an Asset.

What you see on most screens

- Sidebar: move between modules.
- Top bar: global search, company, branch, language, notifications, and user account.
- Headings and badges: show the screen, result count, status, or action availability.
- Tables: use search, filters, and pagination; the current page may not contain every record.

Inventory and receiving

Choosing a profile from the unified intake path

① Navigation ② Company/Branch and language context ③ Current workspace

The canonical path is: Inventory -> Add / Receive Inventory -> choose the profile -> complete the form -> review the preview -> Receive Inventory.

What receiving means

- Each physical piece is recorded as its own Asset, with its identity and Barcode preserved.
- The Asset appears in Inventory and Asset Details according to company, branch, and location.
- Purchase, supplier, date, and historical value are recorded when the workflow requires them.
- The receive may affect supplier balance and accounting according to the transaction type and settings.
- Do not use an old supplier shortcut to create a receive when the unified Inventory path is available.

Receiving steps

5. Confirm the branch, location, supplier, and purchase date.
6. Choose the correct inventory profile; do not mix piece, weight, loose-stone, and jewellery meanings.
7. Enter the required fields with the actual values, then review the preview, prices, and tax.
8. Press Receive Inventory once after reviewing the form.

What happens after completion

A success result appears, and you can find the Asset in Inventory, Asset Details, supplier history, and accounting when applicable. Do not repeat the action when the result is uncertain; contact the

administrator.

Inventory profiles

ذهب بالوزن / Gold By Weight

Gold By Weight

① Navigation ② Company/Branch and language context ③ Current workspace

Use it when the gold value is driven by weight and karat.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

ذهب بالقطعة / Gold By Piece

Gold By Piece

① Navigation ② Company/Branch and language context ③ Current workspace

Use it when each gold piece is a separate physical unit with piece-specific data.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

مجوهرات ألماس / Diamond Jewellery

Diamond Jewellery

① Navigation ② Company/Branch and language context ③ Current workspace

Use it for jewellery that contains mounted diamonds.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

الماس حر / Loose Diamond

Loose Diamond

① Navigation ② Company/Branch and language context ③ Current workspace

Each loose stone is recorded as an individual piece with its own Barcode.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

Complete the required fields to view the tax summary.

Gem Stone Jewellery

① Navigation ② Company/Branch and language context ③ Current workspace

Use it for jewellery with mounted gemstones.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

حجر كريم حر / Loose Gem Stone

Loose Gem Stone

① Navigation ② Company/Branch and language context ③ Current workspace

Use it for a loose gemstone tracked separately.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

Complete the required fields to view the tax summary.

Pearl Jewellery

① Navigation ② Company/Branch and language context ③ Current workspace

Use it for jewellery containing mounted pearls.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

لؤلؤ منفرد / Loose Pearl

Loose Pearl

① Navigation ② Company/Branch and language context ③ Current workspace

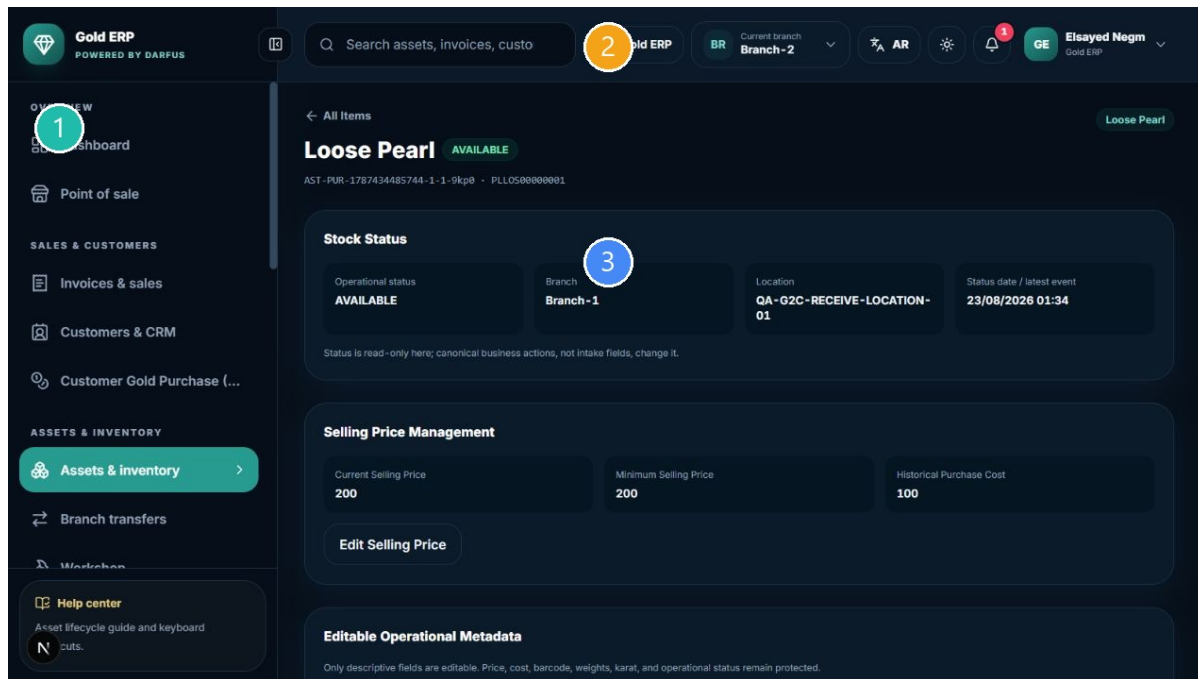

Use it for an individual pearl that needs its own Asset and Barcode.

- Review the shared supplier, location, date, and tax information at the top of the form.
- Enter the profile fields shown on the screen; do not invent a value for a field that is not shown or required.
- Review the historical and current preview and selling price before opening confirmation.
- After receiving, find the Asset from Inventory or by Barcode.

Profile effect

The Asset, Barcode, and purchase history remain linked to the same physical piece. Calculated values and tax are shown according to company settings.

Asset, Barcode, and RFID

Asset details and traceability

① Navigation ② Company/Branch and language context ③ Current workspace

Asset Details is the business traceability card for a physical piece. Use it to review identity, branch, location, status, supplier, history, values, and events.

Barcode

- Barcode search returns the matching physical item.
- Reprint uses the same identity; it does not create a new piece.
- Barcode replacement - when exposed and permitted - changes the active Barcode for the same Asset and keeps the previous history for traceability.

RFID

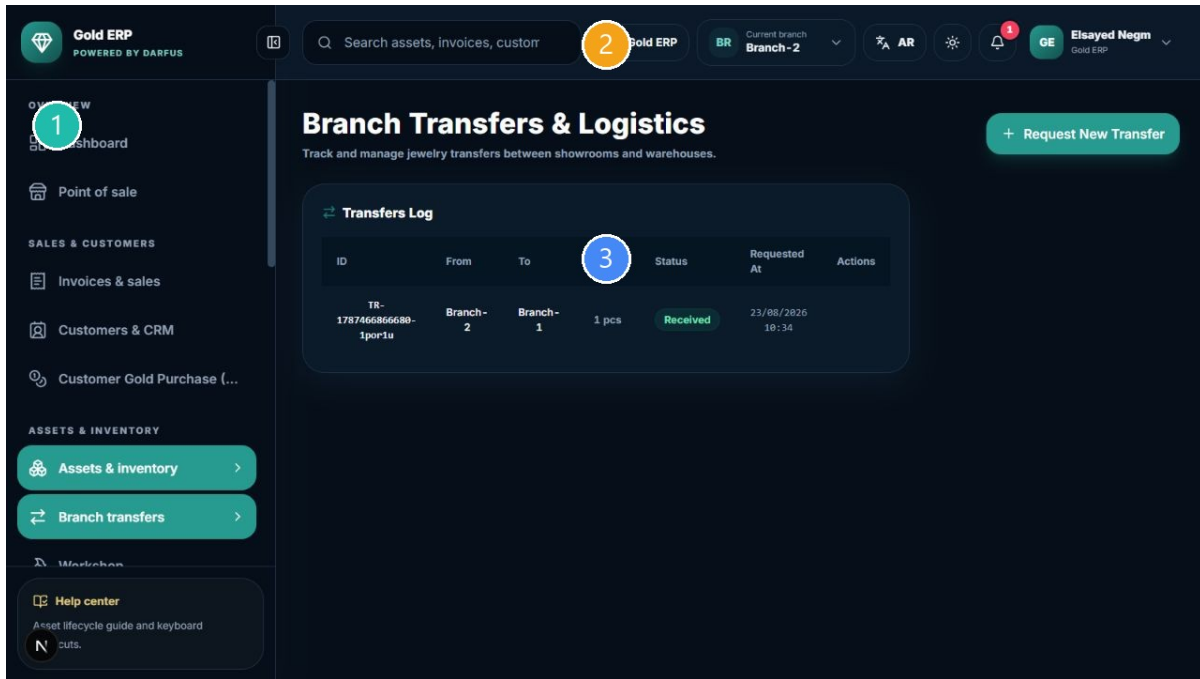

Use RFID only when the RFID control is visible to your account. Assigning or replacing a tag does not change the Asset or Barcode unless the screen explicitly says so.

Do not edit status by imitation

Status changes belong to the correct workflow such as Sale, Transfer, or Workshop, not arbitrary editing in Asset Details.

Transfers, Workshop, and Count

Branch Transfers

Transfer register and states

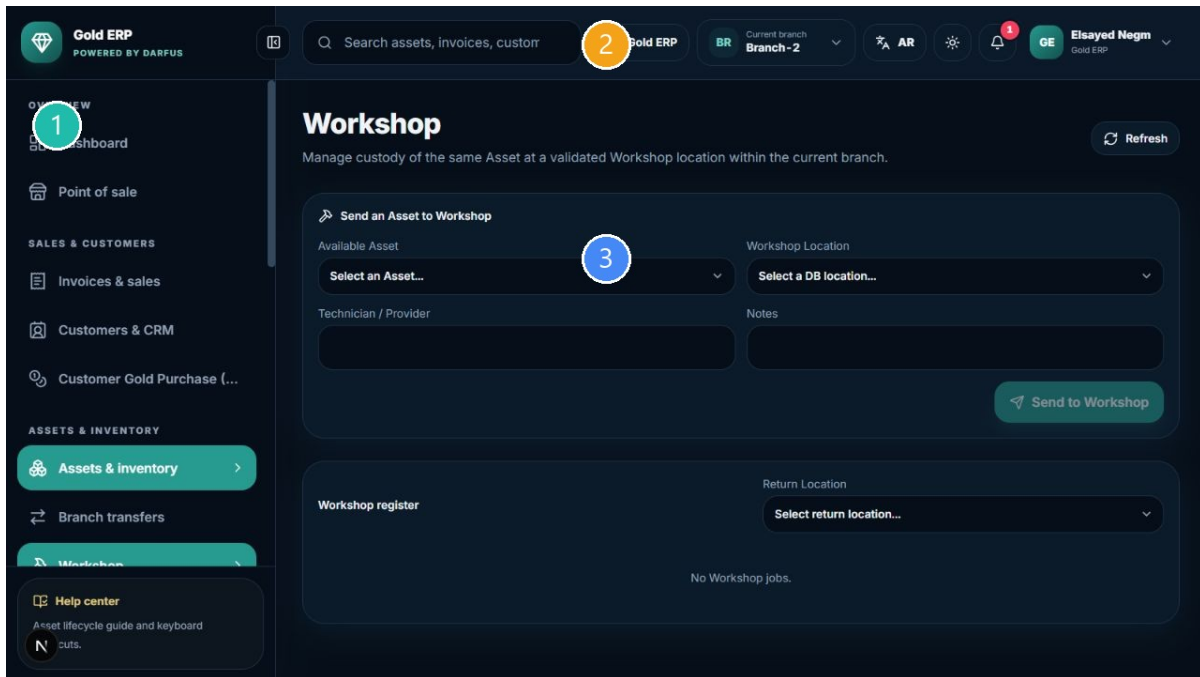

① Navigation ② Company/Branch and language context ③ Current workspace

9. Inventory -> Transfers -> Create Transfer.
10. Choose source and destination branch/location, then select available Assets.
11. Submit the request, then complete Approve, Dispatch, and Receive according to the role.
12. Open the same transfer record to review its state.

What changes?

The physical piece, Asset, and Barcode remain the same; branch/location custody changes through the transfer. A transfer does not create a sales invoice or supplier payment.

Workshop

Workshop register

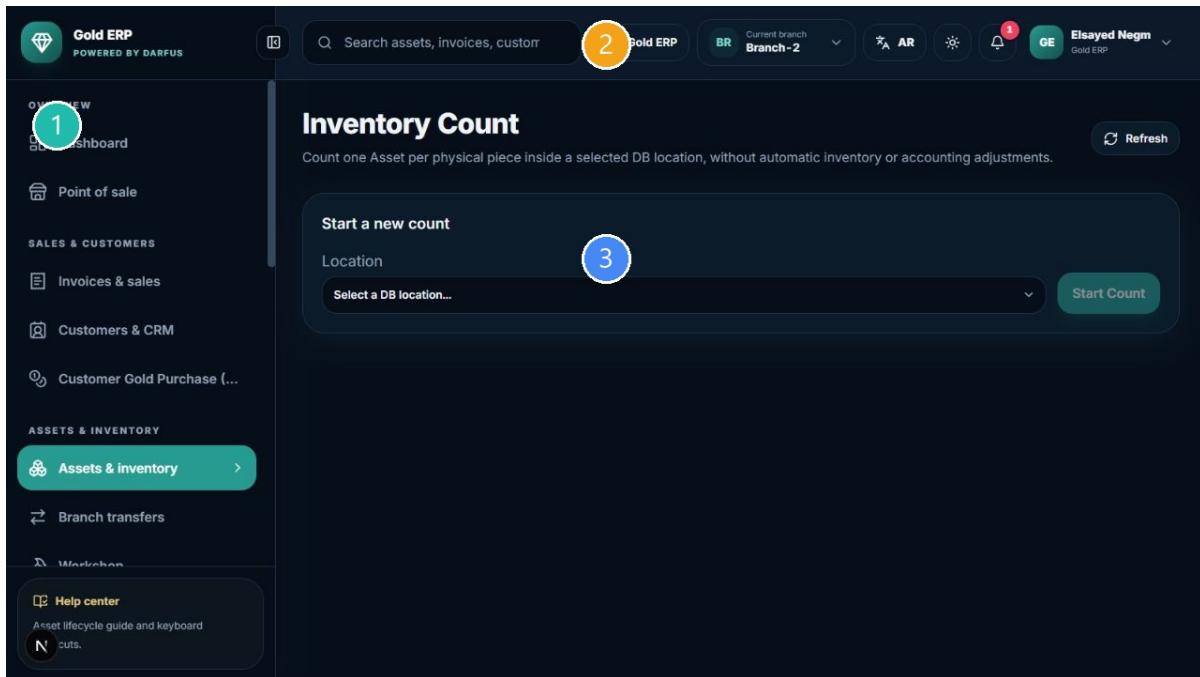

① Navigation ② Company/Branch and language context ③ Current workspace

13. Inventory -> Workshop -> choose the piece and destination.
14. Confirm Send, then follow the same record when it is returned.
15. Do not sell the piece while it is in Workshop when its status prevents sale.

What happens?

The Asset and Barcode stay the same while operational custody/status changes through Workshop.
Workshop is not a sale.

Inventory Count

Count and compare expected with counted

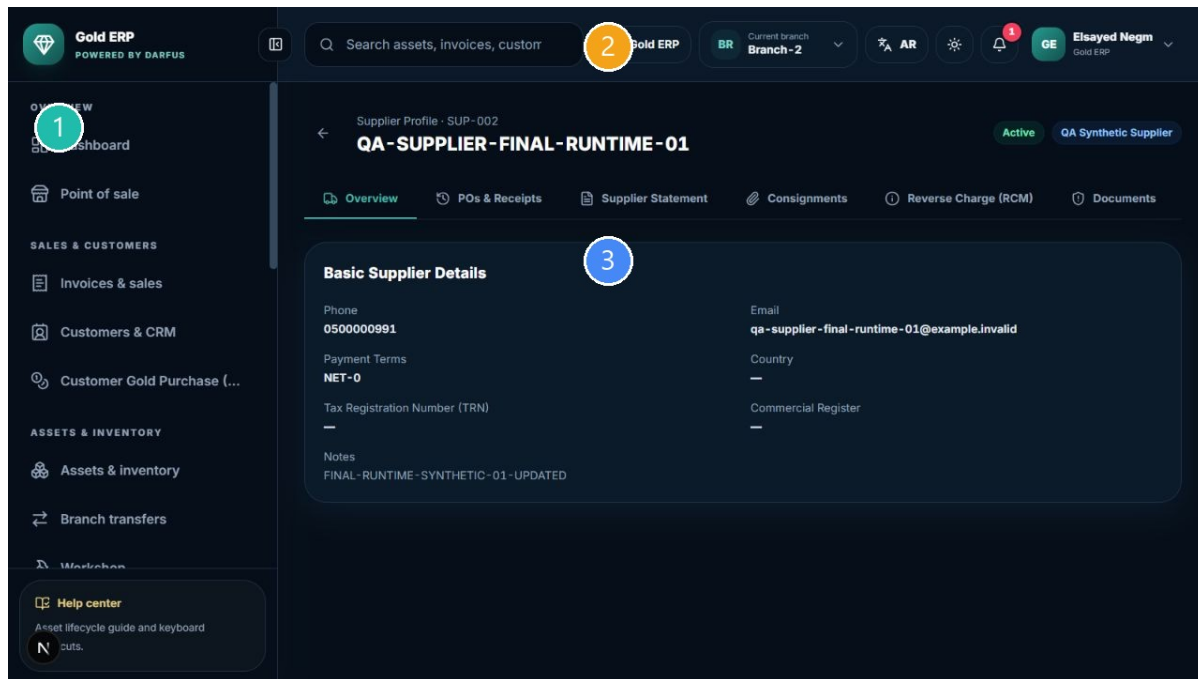

① Navigation ② Company/Branch and language context ③ Current workspace

16. Inventory -> Inventory Count -> choose the location and start a count.
17. Review Expected, Counted, Missing, Unexpected, and Variance.
18. Complete and close the same count when the workflow requires it.

Count effect

A count records evidence of what was observed. Do not assume it changes Asset status automatically; review the count result and audit history.

Suppliers and purchases

Supplier details, balance, and history

① Navigation ② Company/Branch and language context ③ Current workspace

19. Open Suppliers & purchases and search by name, category, or phone.
20. Open View to review supplier details, purchase history, and balance.
21. For create or edit, use the button visible to your account and complete the fields shown.
22. Do not overwrite the balance manually; the system-derived balance comes from recorded transactions.

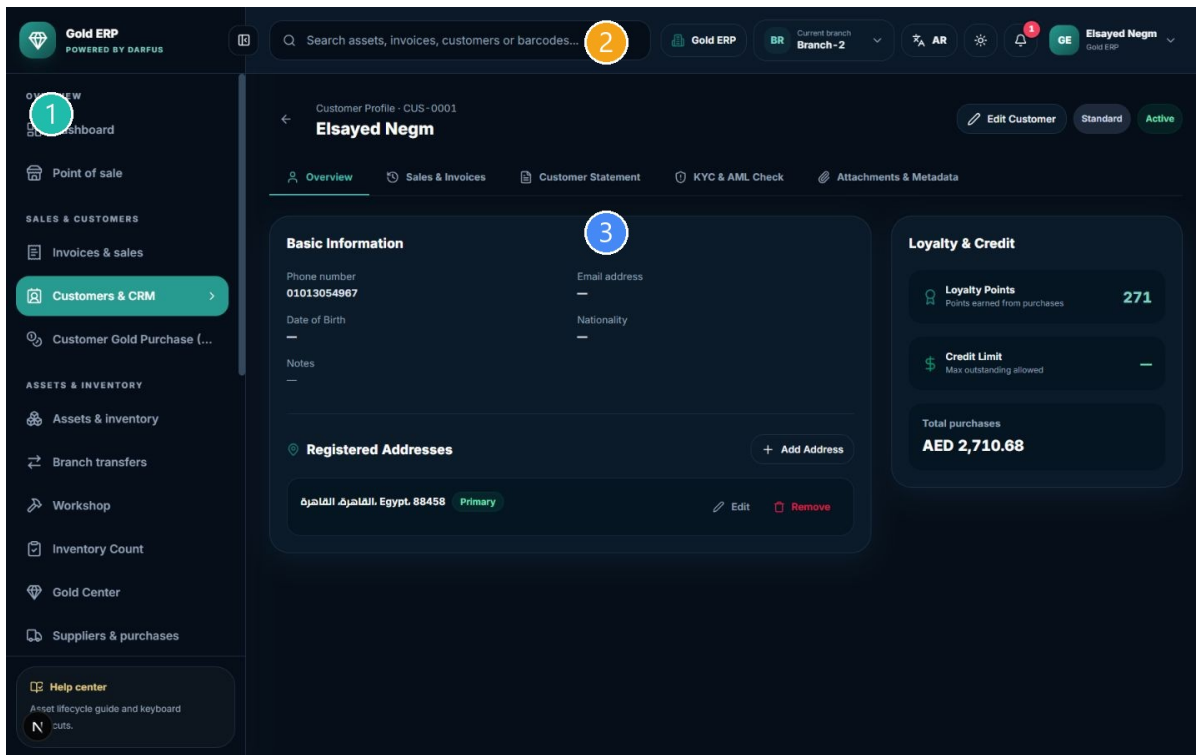

Receiving supplier purchases

Start receiving from Inventory through the unified path. Supplier Details is for information, history, and balance; it is not a second receive source when Inventory is available.

After receiving or paying

After a receive, review the Asset in Inventory, supplier history, and Accounting when applicable. After a successful supplier payment, review the balance, Treasury, and journal.

Customers

Customer details

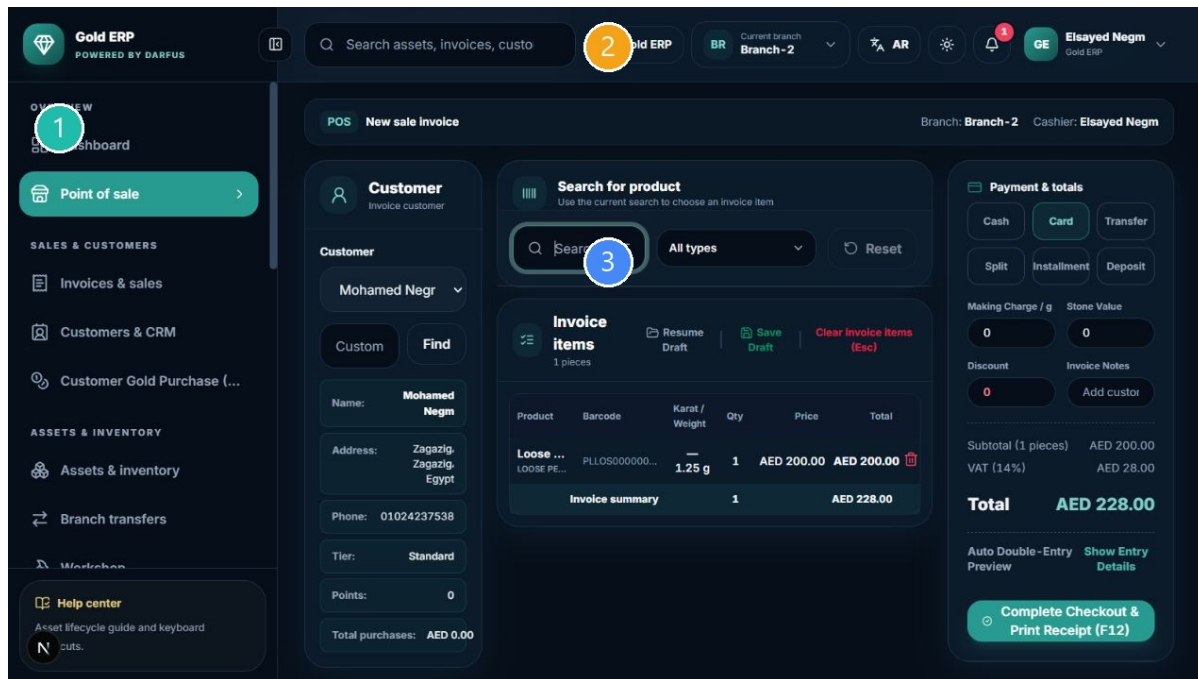

① Navigation ② Company/Branch and language context ③ Current workspace

23. Customers & CRM -> Add Customer.
24. Complete the required fields shown, then save.
25. Search by name or phone and open details when needed.
26. In POS, search by phone and select the customer; POS does not silently create an unknown customer.

Customer effect

Creating or editing a customer does not create an invoice or payment. Sales or deposits may appear in the customer summary according to the workflow.

Point of Sale

Cart and totals before completion

① Navigation ② Company/Branch and language context ③ Current workspace

Making a sale

27. Confirm the branch and customer shown.
28. Search by Barcode or supported item identifier, then select an available Asset.
29. Review the cart, price, availability, VAT, and total.
30. Review Journal Preview when it is shown.
31. Choose a displayed payment method, open confirmation, and complete Checkout once.
32. Open or print the receipt after success.

Journal Preview

The screenshot displays the Gold ERP POS interface for a 'New sale invoice'. The top navigation bar includes the Gold ERP logo, a search bar, and the current branch 'Branch-2'. The left sidebar contains navigation options like 'Dashboard', 'Point of sale', 'Invoices & sales', and 'Assets & inventory'. The central workspace shows customer details for 'Mohamed Negm' and a search for products. The right sidebar displays payment options (Cash, Card, Transfer) and a summary of the invoice with a total of AED 228.00.

Financial preview details

① Navigation ② Company/Branch and language context ③ Current workspace

Journal Preview shows the expected financial effect before completion. The example shows cash, revenue, VAT, cost of goods sold, and inventory; a balanced preview means the preview balances, not that the sale is complete.

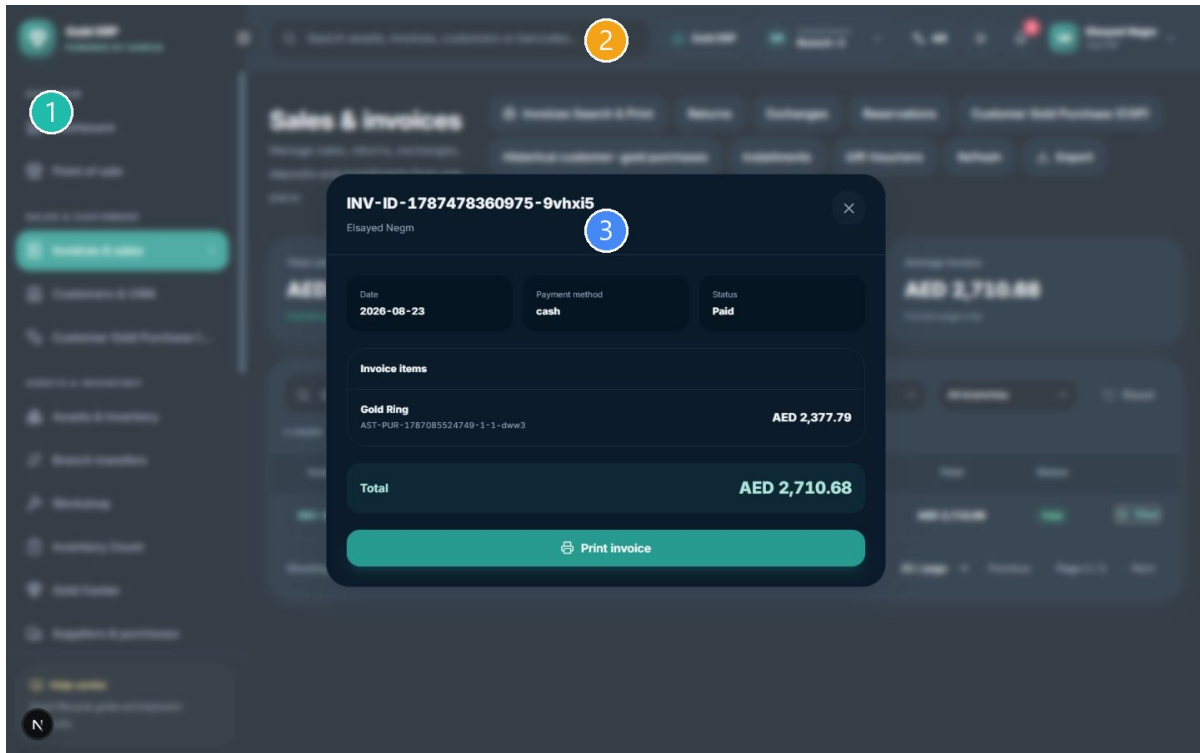

What happens after Checkout

The sale document and receipt are created, payment is recorded, cash or the relevant account is affected, the journal is posted, and the Asset becomes Sold while its Barcode remains linked to the same Asset.

Uncertain result

If an error or uncertain result appears, do not repeat Checkout or payment blindly; ask a supervisor to verify the invoice and payment.

Invoices, returns, and reservations

Existing invoice details

① Navigation ② Company/Branch and language context ③ Current workspace

Invoices and print

33. Invoices & sales -> Invoices Search & Print.
34. Search by invoice, customer, or payment method.
35. Open View to review customer, item, VAT, total, and payment status.
36. Use Print invoice when the button is shown.

Customer information in an invoice represents the sale-time snapshot and may differ later from the current customer profile.

Returns and exchanges

Start from Returns or Exchanges, locate the original invoice, and follow the validations and state allowed by the screen. Do not imitate the workflow by editing status manually.

Reservations and deposits

37. Sales -> Reservations -> choose the customer and Asset.
38. Record a deposit only when the button is shown and the permission is available.
39. Follow deposit, refund, or complete sale from the same reservation record.

Deposit effect

A deposit remains a customer advance until refund or completion and affects Treasury and Accounting according to the action.

Price status and update state

① Navigation ② Company/Branch and language context ③ Current workspace

Gold Center

Gold Center shows current reference prices, karats, and freshness state. Supported pricing workflows use this reference; do not bypass a stale or unavailable state.

Customer Gold Purchase

Customer Gold Purchase drafts

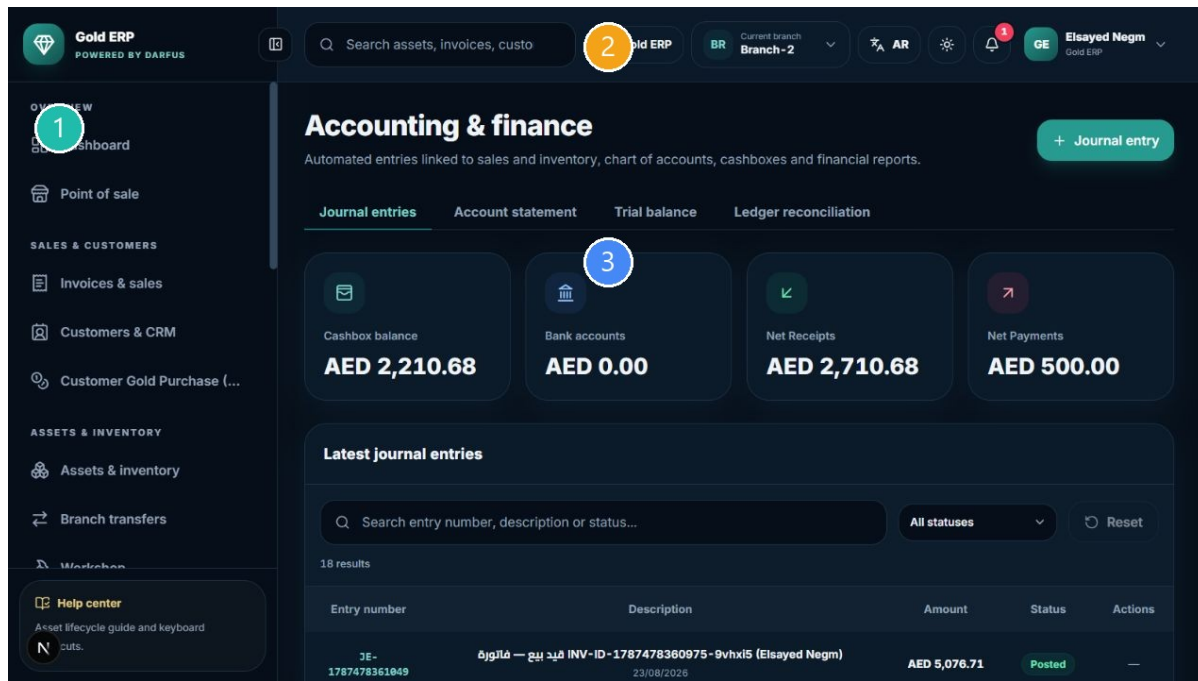

① Navigation ② Company/Branch and language context ③ Current workspace

40. Open Customer Gold Purchase and create a draft when the button is shown.
41. Enter customer and gold details, then review validation, price, and snapshot.
42. Post only after validation, then review Settlement when available.

Not a supplier receive

Customer Gold Purchase is separate from supplier stock receiving. Do not mix the two documents.

Accounting, Treasury, and Reports

Accounting screen

① Navigation ② Company/Branch and language context ③ Current workspace

- Accounting: review journals, source, date, debit, credit, and status.
- Chart of Accounts: review accounts and branch mappings when permitted.
- Statements and Reports: use date and branch filters; do not treat an empty screen as a final zero before checking filters.
- Treasury: review cash session, movements, and payment results shown to your account.

Treasury
Manage cash & bank liquidity, receipts, payments and daily closing.

Opening counted amount: 0

Open register

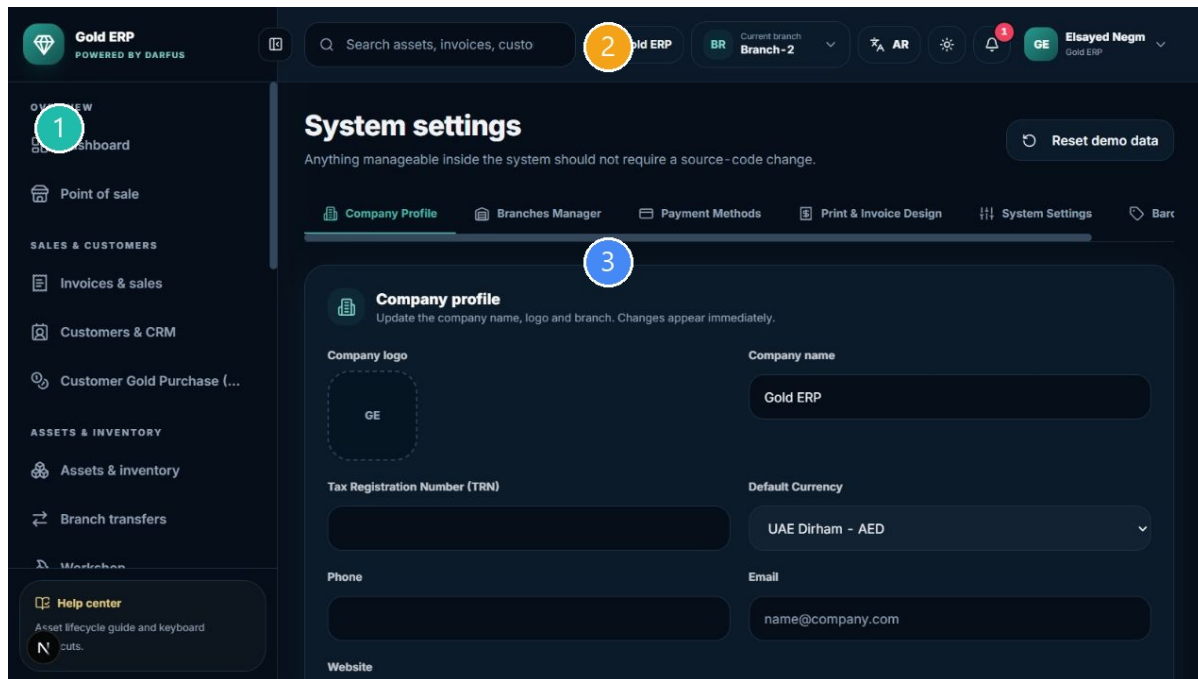

Treasury and movements

- ① Navigation ② Company/Branch and language context ③ Current workspace

Journal safety

Do not manually rewrite a posted journal. If a journal or payment is uncertain, keep the reference and ask the finance administrator to review it.

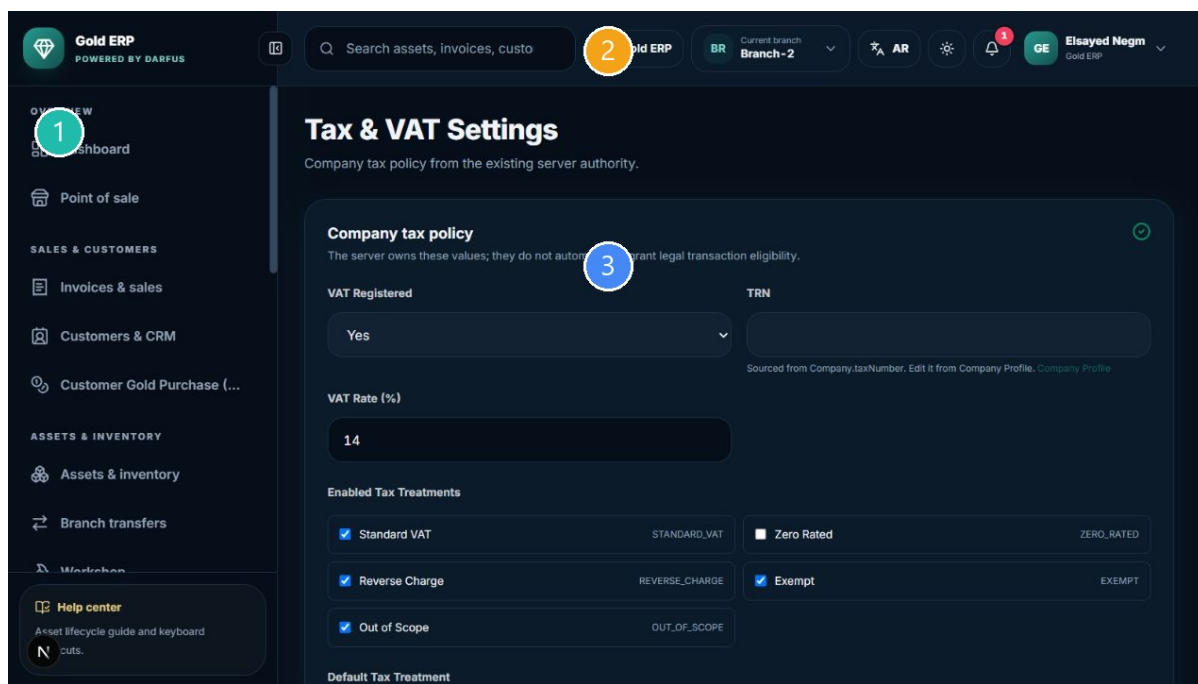

Users and Settings

Company settings

① Navigation ② Company/Branch and language context ③ Current workspace

- Users and Employees: create, deactivate, and assign role/branch when permitted.
- Tax & VAT: review company policy and rate; only the authorized administrator should change them.
- Locations: add or disable a location when permitted; do not delete a value used by historical records.
- Barcode codes: review codes in the dedicated screen; do not create codes outside the supported workflow.

Tax policy

① Navigation ② Company/Branch and language context ③ Current workspace

Money settings

Settings that affect price, tax, or accounting should be changed only by the authorized administrator, with a documented reason.

Troubleshooting and safety

What you see	What to do
الزر غير ظاهر	Check role, branch, and record status.
Permission denied	Ask the administrator to review the permission.
الباركود غير موجود	Check spelling, branch, and item status.
العنصر غير متاح للبيع	It may be Sold, Reserved, in Workshop, or in Transfer.
السعر غير متاح أو قديم	Do not bypass price protection; check Gold Center or contact the administrator.
المعاينة غير متاحة	Complete required fields and check branch, location, and settings.

غير واضحة Checkout نتيجة دفع أو	Do not repeat it; ask for invoice and payment verification.
الجلسة انتهت	Sign in again and verify any financial action before repeating it.

Do not do this

- Do not sell the same physical piece twice.
- Do not move an item between branches outside Transfer.
- Do not create a fake supplier or customer to bypass a required field.
- Do not repeat payment or Checkout without knowing the result of the first attempt.
- Do not delete historical master data when Disable is available.

Status glossary and quick task finder

Status	Meaning
Available	Normally available for the allowed workflow.
Reserved	Reserved and not available for ordinary sale.
Workshop	In the Workshop workflow.
Sold	Sold with its financial effect recorded.
Pending / Approved / In Transit / Received	Transfer lifecycle states.
Missing / Unexpected / Variance	Inventory Count results.
Draft / Validated / Posted	Customer Gold Purchase lifecycle.

Quick recipes

- Receive stock: Inventory -> Add / Receive Inventory -> choose type -> enter data -> review -> Receive.
- Find a piece: Inventory -> search by Barcode or open Asset Details.
- Transfer: Inventory -> Transfers -> Create -> Approve -> Dispatch -> Receive.
- Count: Inventory -> Inventory Count -> location -> Start -> scan/count -> Complete/Close.
- Create a customer: Customers -> Add Customer -> save -> use it in POS.
- Sell: POS -> customer -> Barcode -> cart -> totals -> payment -> Checkout once -> receipt.

- Review a journal: Accounting -> find the source/reference -> review debit, credit, and status.

Handover and training checklist

- ☐ I know how to sign in and select the correct branch.
- ☐ I know how to search for customers, suppliers, and pieces by Barcode.
- ☐ I know how to receive, transfer, send to Workshop, and count inventory.
- ☐ I know how to review totals, VAT, and Journal Preview before a sale.
- ☐ I know when I need administrator permission.
- ☐ I will not repeat an uncertain financial action without verification.

Quick User Training Checklist

Start with sign-in and branch context, then take a read-only tour of Inventory, POS, and Accounting. Do not use real customer data in the first training session.

Current release notes

External e-invoicing integration is not part of this release scope. Do not bypass price or tax protection when a stale or unavailable state appears.
